4) Replace the depth adjustable cap.

2) Insert a new disposable lancet firmly into lancet carrier.

Special conditions for use statement(s): GE200 Blood Glucose Monitoring System provides plasma equivalent results.

- The GE200 Blood Glucose Monitoring System is not intended to be used for diagnosis of, or screening for diabetes or for a single user to aid in the management of diabetes at home.

- Are designed for use only with GE200 Blood Meter to assure accurate results.

The GE200 Blood Glucose Monitoring Systems is to be used by:

Intended Use

- Fingertip
- Palm

Severe dehydration and excessive water loss may cause inaccurately low results.

- GE200 Test Strips are designed for use with capillary whole blood samples. Do not use serum or plasma samples.

- Caution is advised when glucose values are below 2.8 mmol/L or above 13.9 mmol/L. Consult a Physician as soon as possible, if healthcare professionals should evaluate their technique and their patients’ technique regarding the use of the GE200 Blood

Test results may vary if blood samples are taken from different sites or under certain conditions where glucose levels can change rapidly such as: following a drink, a meal, an insulin dose or exercise. In these cases, only the fingertip should be used.

DO NOT test on the palm or forearm if you are testing for hypoglycemia (low blood glucose).

- Press the release button.

6) Place the lancing device to your fingertip and press the release button.

7) The countdown mode will begin on the display window. After 5 seconds your test result will appear.

- Close the test strip vial immediately after taking test strip out from the vial.

Precautions

- Inaccurate results may occur in severely hypotensive individuals or patients in shock.

- Caution is advised when glucose values are below 2.8 mmol/L or above 13.9 mmol/L. Consult a Physician as soon as possible.

- Close the test strip vial immediately after taking test strip out from the vial.

- Do not use serum or plasma samples.

- Test results may vary if blood samples are taken from different sites or under certain conditions where glucose levels can change rapidly such as: following a drink, a meal, an insulin dose or exercise. In these cases, only the fingertip should be used.

- If the test strip vial is opened, it should only be used for 30 days and the expiration date should not be exceeded.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.

- The test strip vial should be kept away from the reach of children.

- Do not use the test strip vial if it is damaged or if the test strip vial is not complete filled with blood.

- The test strip vial should be kept at room temperature (max. 25°C) and protected from light.
